

**US Army Corps
of Engineers®**
Kansas City District

Cost Engineering Services

- The Kansas City District's estimating capability consists of 7 certified cost estimators of varying disciplines with each estimator having at least 10 years of experience. One staff member is an instructor for the Corps' Cost Estimating Basics Course.
- Estimates are made on a variety of project types including:
 - New building construction
 - Rehabilitation type work
 - Remodeling including asbestos abatement and lead based paint removal
 - Utilities
 - Demolition
 - Roadways & parking
 - Large earthwork projects
 - Hazardous, Toxic, and Radiological Waste cleanups
 - Underground Storage Tank removal
 - Operation and Maintenance of treatment facilities
- Estimate Costs range from under \$25,000 to \$100 million plus.

- Estimates can be made for any stage of design
 - Preconcept - Parametric estimating is used when virtually no information about the design is known. A minimum amount of information is required to generate costs using computer modeling. When more information is known a more refined cost estimate can be obtained.
 - Fully Designed – Detailed quantity takeoffs are performed. Each item is priced with labor, equipment, and material unit costs. A determination of which work is to be sub-contracted is made and appropriate overheads and profits are applied to develop the total contract cost.
- Estimates can be made from a variety of media
 - Pencil and Paper
 - Spreadsheet
